AI TOOLS

YOUR 3B TASK MIX

PROFESSION SUMMARY

You already use tools like ChatGPT, Claude, Microsoft Copilot, but many reviewed tasks still run manually. Expanding AI into documentation, planning, and review loops could unlock significant productivity.

Business Development in healthcare focuses on expanding market presence and generating sustainable revenue through strategic partnerships, client relationships, and value-driven solutions that address the sector's regulatory and competitive complexities.

CAREER IDENTITY

AI-Augmented Senior Business Development Manager · 61% alignment

AI is not replacing your career. It is changing how exceptional professionals create value. Your strongest advantage comes from combining deep domain expertise with intelligent AI collaboration.

02

AI Readiness Profile

Six dimensions scored 0–100. Scores below 40 are shown in gold as your highest-leverage development areas.

Awareness		70	70/100
Adoption		90	90/100
Tool Usage		78	78/100
Confidence		5	5/100
Productivity		60	60/100
Learning Readiness		67	67/100

STRENGTHS

✓ AI Adoption

✓ BLEND Fluency

✓ Adaptability

✓ Business Strategy Development

03

3B Task Analysis

Each task you shared is classified as BUILD (human judgment leads), BLEND (you + AI together) or BOT (automate). The left rule colour shows the classification.

Strategic Account Planning & Review

4 hrs/week

Complexity: High

AI usage today: Frequently

BUILD IT

Your ability to read account risk and shape growth plans is the core value here, not the paperwork.

You spend about 3 hours a week on this, and the real work is judging which accounts are at risk and where expansion makes sense — that call is yours to make. AI tools can help summarize account history or surface patterns, but the strategic interpretation and relationship context stay with you.

RECOMMENDED ACTIONS

• Before your next account review, use an AI summarization tool to pull together recent account activity and flag anomalies, then spend your time interpreting what it means for the relationship.

• Review how this task fits your weekly priorities.

Client Relationship Meetings

4 hrs/week

Complexity: Mission Critical

AI usage today: Sometimes

BUILD IT

The trust you build face-to-face with hospital staff can't be replicated by software.

You spend roughly 4 hours a day on calls and visits with administrators and procurement teams, and this is fundamentally about earning and keeping trust. Technology has little role here beyond scheduling or note-taking support — the relationship itself is entirely yours to manage.

RECOMMENDED ACTIONS

• Identify one upcoming high-stakes visit and prepare a tailored discussion plan focused on uncovering unmet needs rather than routine updates.

• Review how this task fits your weekly priorities.

Pipeline Review & CRM Updates

BOT IT

2 hrs/week · Complexity: High · AI usage today: Sometimes

Updating records and prioritizing follow-ups is exactly the kind of routine work tools can take off your plate.

You spend about 2 hours a week on this low-complexity, repetitive task, and it's already only sometimes AI-assisted. Automating the data entry and stage-tracking portions would free that time for actual deal-advancing conversations, while you'd still glance over flagged priorities.

RECOMMENDED ACTIONS

- Test your CRM's built-in automation rules for stage updates and reminders this week, and measure how much manual entry time it removes.
- Review how this task fits your weekly priorities.

Suggested tools: Salesforce Flow · HubSpot Workflows · Microsoft Power Automate

Proposal & Contract Development

BLEND IT

4 hrs/week · Complexity: High · AI usage today: Frequently

Drafting the first version of a proposal can be sped up, but the negotiation itself is still on you.

You spend about 3 hours a week here, already using AI frequently, and that's a good sign — drafting boilerplate proposal language and pricing tables is mechanical enough for tools to accelerate. But finalizing terms with legal, finance, and the client still requires your judgment and relationship skill.

RECOMMENDED ACTIONS

- Use an AI drafting tool to generate a first-pass proposal template this week, then spend your saved time refining negotiation strategy with legal and finance.
- Review how this task fits your weekly priorities.

Suggested tools: Microsoft Copilot (Word) · PandaDoc · ChatGPT (Team/Enterprise)

Regulatory Compliance Review of Deals

BLEND IT

4 hrs/week · Complexity: Mission Critical · AI usage today: Frequently

Screening deals for compliance red flags is where a tool can do the first pass, but you still need to make the final call.

You spend about 1.5 hours a week checking agreements against CLIA/CAP and other regulations, and you already use AI frequently here — that's the right direction. A tool can flag likely compliance issues in the language, but confirming whether something is genuinely a risk in a mission-critical deal still needs your judgment.

RECOMMENDED ACTIONS

- Run your next pending agreement through an AI contract-review tool to flag potential regulatory language issues, then verify the flagged items yourself before escalating.
- Review how this task fits your weekly priorities.

Suggested tools: Luminance · Microsoft Copilot (Word/Contract review) · ChatGPT (Team/Enterprise)

Market & Competitive Intelligence Gathering

BLEND IT

2 hrs/week · Complexity: Medium · AI usage today: Always

You can let tools handle the routine scanning of competitors so you focus on what it means for your strategy.

You spend about 2 hours a month tracking competitor pricing and diagnostic trends, and you're already using AI assistance for this. Technology can keep collecting and summarizing this information continuously, but you'll still need to translate what it finds into positioning decisions for your team.

RECOMMENDED ACTIONS

- Set up an automated alert or monitoring tool for competitor pricing and trend changes, and reserve your time for interpreting what shifts mean for your positioning.
- Review how this task fits your weekly priorities.

Suggested tools: Crayon · Google Alerts · Perplexity AI

Cross-Functional Deal Coordination

BUILD IT

4 hrs/week · Complexity: High · AI usage today: Sometimes

This is the kind of coordination work that depends on your judgment and relationships, not on automation.

Every week, you bring clinical, legal, and finance together to make sure proposals are compliant and priced right — that requires reading people, resolving conflicting priorities, and applying judgment under high stakes. No tool can substitute for you knowing which stakeholder to loop in or how to keep a deal moving when teams disagree.

RECOMMENDED ACTIONS

- After your next coordination meeting, ask one participant from each function for feedback on how the alignment process could go more smoothly, and apply one improvement next cycle.
- Review how this task fits your weekly priorities.

New Opportunity Prospecting

BLEND IT

2 hrs/week · Complexity: High · AI usage today: Sometimes

Finding and screening prospects can be sped up by tools, but deciding who's worth pursuing stays your call.

You touch prospecting daily, and much of the early identification and initial qualification is fairly repeatable. AI tools can surface and pre-screen candidates like hospital systems or physician groups faster than manual research, but you still need to judge fit, timing, and relationship potential before investing real time.

RECOMMENDED ACTIONS

- Identify one prospecting tool to trial for surfacing and pre-screening leads, and measure how much manual research time it saves you over two weeks.
- Review how this task fits your weekly priorities.

Suggested tools: ZoomInfo · LinkedIn Sales Navigator · HubSpot Sales Hub (AI prospecting features)

Sales Forecasting & Reporting

BLEND IT

4 hrs/week · Complexity: High · AI usage today: Sometimes

Pulling the numbers together for your pipeline report can be automated, but explaining them to leadership stays on you.

You spend about 1.5 hours monthly compiling revenue forecasts and pipeline reports, work that's fairly structured and already gets some AI assistance. Tools can pull deal-stage data and draft the numbers automatically, but you'll still need to interpret what's driving the forecast and present it credibly to leadership.

RECOMMENDED ACTIONS

- Check whether your CRM has a built-in forecasting report you can automate, and use the time saved to prepare a short narrative on what's driving the numbers before your leadership meeting.
- Review how this task fits your weekly priorities.

Suggested tools: Salesforce (native reports/dashboards) · Power BI · Clari

Internal Strategy & Leadership Alignment

BUILD IT

4 hrs/week · Complexity: Mission Critical · AI usage today: Sometimes

Aligning your priorities with leadership is exactly the kind of high-stakes judgment work that stays yours.

This monthly, mission-critical alignment work depends on your ability to read organizational priorities and advocate for the right direction — something no tool can do for you. Your time here is best spent sharpening how you influence and align rather than looking for automation.

RECOMMENDED ACTIONS

- Before your next leadership meeting, prepare one clear point of view on a growth priority and practice articulating the trade-offs behind it.
- Review how this task fits your weekly priorities.

Pricing Strategy Development

BLEND IT

8 hrs/week · Complexity: Mission Critical · AI usage today: Sometimes

You can speed up the number-crunching behind pricing, but the final tier decisions still need your judgment.

Right now you spend about 1.5 hours a week pulling together cost structures and market benchmarks each quarter, and you sometimes already use AI to help. Tools can assemble the comparison data and flag pricing patterns much faster, but you'll still need to decide where tiers land given margin goals and competitive positioning.

RECOMMENDED ACTIONS

- Next quarter, try feeding your cost and benchmark data into an AI analysis tool to generate a first-pass comparison, then spend your saved time refining the strategic tier decisions.
- Review how this task fits your weekly priorities.

Suggested tools: Microsoft Excel with Copilot · Google Sheets with add-on AI analysis

Client Escalation Management

BUILD IT

2 hrs/week · Complexity: Mission Critical · AI usage today: Never

Handling upset clients and protecting key relationships depends entirely on your judgment and trust, not on software.

You're dealing with escalations almost daily, and you currently don't use any AI assistance here — for good reason. These conversations require reading the situation, managing emotion, and making calls that protect a mission-critical account, which stays squarely your responsibility.

RECOMMENDED ACTIONS

- After your next escalation, do a short personal debrief on what worked and what didn't, and note it for future similar situations.
- Review how this task fits your weekly priorities.

Trend & Regulatory Monitoring

BOT IT

4 hrs/week · Complexity: Medium · AI usage today: Frequently

Scanning industry news and regulatory updates is exactly the kind of routine reading tools can now do for you.

You already lean on AI frequently for this monthly review, and the work itself is low on creativity and direct human interaction. Letting a tool surface and summarize the relevant publications frees up your hour for actually thinking about what the trends mean for your accounts.

RECOMMENDED ACTIONS

- Set up an automated news/regulatory alert or summarization tool this month and measure how much monitoring time it saves you.
- Review how this task fits your weekly priorities.

Suggested tools: Feedly AI · Microsoft Copilot / Bing news alerts · Google Alerts

06

Learning Roadmap

A phased sequence: quick wins in 30 days, workflow shifts in 90, and capability depth over 12 months.

PHASE 1

Next 30 Days

- Before your next account review, use an AI summarization tool to pull together recent account activity and flag anomalies, then spend your time interpreting what it means for the relationship.
- Identify one upcoming high-stakes visit and prepare a tailored discussion plan focused on uncovering unmet needs rather than routine updates.
- Test your CRM's built-in automation rules for stage updates and reminders this week, and measure how much manual entry time it removes.

PHASE 2

Next 90 Days

- Use an AI drafting tool to generate a first-pass proposal template this week, then spend your saved time refining negotiation strategy with legal and finance.
- Run your next pending agreement through an AI contract-review tool to flag potential regulatory language issues, then verify the flagged items yourself before escalating.
- Set up an automated alert or monitoring tool for competitor pricing and trend changes, and reserve your time for interpreting what shifts mean for your positioning.

PHASE 3

Next 12 Months

- Deepen Competitive Intelligence
- Deepen Contract Negotiation
- Deepen Cross-Functional Collaboration

YOUR ACTION PLAN

Start · Automate · Learn

START

- Use an AI drafting tool to generate a first-pass proposal template this week, then spend your saved time refining negotiation strategy with legal and finance.
- Run your next pending agreement through an AI contract-review tool to flag potential regulatory language issues, then verify the flagged items yourself before escalating.
- Set up an automated alert or monitoring tool for competitor pricing and trend changes, and reserve your time for interpreting what shifts mean for your positioning.

AUTOMATE

- Test your CRM's built-in automation rules for stage updates and reminders this week, and measure how much manual entry time it removes.
- Set up an automated news/regulatory alert or summarization tool this month and measure how much monitoring time it saves you.

LEARN

- Human Edge (BUILD)
- Automation Readiness

07

Recommended AI Toolkit

Twelve tools ranked by how many of your tasks they touch and how much automatable (BOT) work they remove. Start at the top.

#	TOOL	PRIORITY	WHY IT MATTERS FOR YOU
01	Google Alerts Monitoring	Critical	Recommended across 2 of your core tasks and linked to 1 automatable (BOT) task. Keeps competitor pricing, diagnostic trends and regulatory updates flowing to you continuously so your time goes to interpreting what shifts mean for positioning and accounts. Linked tasks: Market & Competitive Intelligence Gathering · Trend & Regulatory Monitoring
02	ChatGPT (Team/Enterprise) Business & Productivity	High	Recommended across 2 of your core tasks. Accelerates boilerplate proposal language and pricing tables, and gives a first pass on compliance language — while final terms and risk calls stay with you. Linked tasks: Proposal & Contract Development · Regulatory Compliance Review of Deals
03	Feedly AI Monitoring	High	Linked to 1 automatable (BOT) task. Surfaces and summarizes relevant publications so your monitoring hour becomes thinking time about what trends mean for your accounts. Linked tasks: Trend & Regulatory Monitoring
04	HubSpot Workflows CRM Automation	Medium	Adopt after the top tools. Automates data entry and stage tracking so the 2 hours a week here go to deal-advancing conversations. Linked tasks: Pipeline Review & CRM Updates
05	Microsoft Copilot / Bing news alerts Monitoring	Medium	Adopt after the top tools. An alternative route to automated news and regulatory alerts inside the Microsoft stack. Linked tasks: Trend & Regulatory Monitoring
06	Microsoft Power Automate CRM Automation	Medium	Adopt after the top tools. Handles reminders and record updates across Microsoft-connected systems for the pipeline review task. Linked tasks: Pipeline Review & CRM Updates
07	Salesforce Flow CRM Automation	Supporting	Supporting tool for specific workflows. Native stage-update automation if Salesforce is your CRM. Linked tasks: Pipeline Review & CRM Updates
08	Clari Forecasting	Supporting	Supporting tool for specific workflows. Pulls deal-stage data and drafts the forecast numbers so you can focus on the narrative for leadership. Linked tasks: Sales Forecasting & Reporting
09	Crayon Competitive Intelligence	Supporting	Supporting tool for specific workflows. Continuous competitor tracking and summaries for your positioning decisions. Linked tasks: Market & Competitive Intelligence Gathering
10	Google Sheets with add-on AI analysis Analysis	Supporting	Supporting tool for specific workflows. Assembles cost and benchmark comparisons and flags pricing patterns ahead of your tier decisions. Linked tasks: Pricing Strategy Development

#	TOOL	PRIORITY	WHY IT MATTERS FOR YOU
11	HubSpot Sales Hub (AI prospecting) Prospecting	Supporting	Supporting tool for specific workflows. Surfaces and pre-screens hospital systems and physician groups faster than manual research. Linked tasks: New Opportunity Prospecting
12	LinkedIn Sales Navigator Prospecting	Supporting	Supporting tool for specific workflows. Early identification and qualification of prospects; you still judge fit, timing and relationship potential. Linked tasks: New Opportunity Prospecting

WHAT HAPPENS NEXT

Work the 30-day actions first, then re-run your CareerShift assessment to track how your readiness score and 3B mix move. Your report is versioned, so every re-run builds a record of your shift.
